

Program	Level Name of the program	Third cycle SEE Doctoral Studies in Mathematical Science				
<b>COURSE</b>						
Course title	<b>Parameter estimation</b>					
Course code	Semester	Course status	ECTS	Contact hours		
AMAT 660	II	Elective course	10	30		
Lecturer	Prof. Dr. Lejla Smajlović Prof. Dr. Franz Kappel, Prof. Dr. Elisaveta Pancheva					
Course Goals	The course should provide a high level overview on a wide range of parameter estimation, test theory and optimal design					
<b>COURSE CONTENT</b>						
<ul style="list-style-type: none"> <li>- Point estimation theory: <ul style="list-style-type: none"> <li>o Output models</li> <li>o Assumptions on the measurement process</li> <li>o Properties of estimators</li> <li>o Fisher information Cramer-Rao theorem</li> </ul> </li> <li>- Least squares estimators: <ul style="list-style-type: none"> <li>o Nonlinear least squares</li> <li>o Nonlinear least squares</li> <li>o Linear approximation</li> <li>o Generalized least squares</li> <li>o Numerical methods</li> </ul> </li> <li>- Maximum likelihood estimation: <ul style="list-style-type: none"> <li>o Normal data</li> <li>o Non-normal data</li> </ul> </li> <li>- Bayesian estimation: <ul style="list-style-type: none"> <li>o Choice of prior distributions</li> <li>o Posterior distributions</li> <li>o Highest posterior density regions</li> <li>o Normal approximation to posterior density</li> </ul> </li> <li>- Asymptotic theory: <ul style="list-style-type: none"> <li>o Introduction</li> <li>o Least squares estimation</li> <li>o Maximum likelihood estimation</li> </ul> </li> <li>- Optimal experimental design: <ul style="list-style-type: none"> <li>o Introduction</li> <li>o Generalized measurement procedures</li> <li>o Probability measures on compact sets</li> <li>o Optimal design criteria in terms of the Fisher information matrix</li> </ul> </li> </ul>						
<b>LITERATURE</b>
